

Ward Keating Koupling™

Keating Koupling for round ductwork

Keating Koupling for oval ductwork

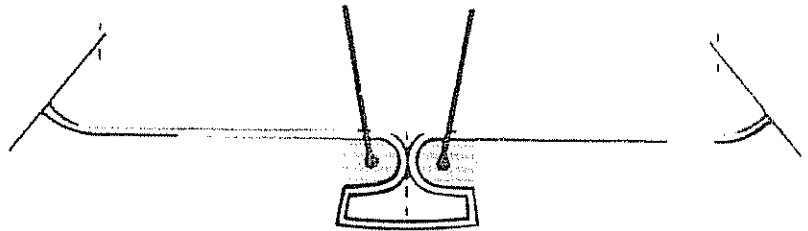

The Ward Keating Koupling is worker friendly - simply push it onto ductwork and it seals itself.

Roll-formed from 20 gauge galvanized steel, the Keating Koupling is a favorite among contractors who install round, spiral, or oval ductwork. The Keating Koupling provides a double "S" connection, creating a seal that is virtually air tight when installed in accordance with Ward Industries' installation instructions.

The Keating Koupling is a real time saver, compared with companion angles or three-piece couplings in the marketplace. It is self-sealing, which eliminates the need for sealing at the job site and greatly speeds up the installation process, and it is easily secured to the duct by screwing every 12 inches on center.

The Keating Koupling also provides a smoother, cleaner appearance on exposed installations. It is available in galvanized, stainless steel and aluminum.

Integrated Sealant Pocket

An integrated sealant pocket provides for a virtually air-tight installation.
